Accredited Laboratory

A2LA has accredited

CAL-RITE CORPORATION

Naperville, IL

for technical competence in the field of

Calibration

This laboratory is accredited in accordance with the recognized International Standard ISO/IEC 17025:2017 *General requirements for the competence of testing and calibration laboratories*. This laboratory also meets the requirements of ANSI/NCSL Z540-1-1994 and R205 – Specific Requirements: Calibration Laboratory Accreditation Program. This accreditation demonstrates technical competence for a defined scope and the operation of a laboratory quality management system (*refer to joint ISO-ILAC-IAF Communiqué dated April 2017*).

Presented this 7th day of September 2022.

Vice President, Accreditation Services
For the Accreditation Council
Certificate Number 866.01
Valid to October 31, 2024

For the calibrations to which this accreditation applies, please refer to the laboratory's Calibration Scope of Accreditation.

CALIBRATION

Valid To: October 31, 2024 Certificate Number: 0866.01

In recognition of the successful completion of the A2LA evaluation process, accreditation is granted to this laboratory to perform the following calibrations[1, 7]:

I. Dimensional

Parameter/Equipment	Range	CMC[2, 5, 8](±)	Comments
Calipers[3]	Up to 6 in (> 6 to 20) in (> 20 to 60) in	(69 + 0.6*R*) µin (200 + 0.6*R*) µin (460 + 0.6*R*) µin	Gage blocks
Displacement Length Indicators[3] – (Drop, Test and LVDT)	Up to 4 in (> 4 to 12) in	7*L* + 29 µin 12*L* + 20 µin	Gage blocks, digital micrometer head
Extensometers/COD Gage/Deflectometers[3]			ASTM E83 and ISO 9513;
Gage Lengths 2 in and Below	Up to 0.02 in (> 0.02 to 2.0) in	14 µin 18 µin	Gage blocks, extensometer calibrator; uncertainties listed in displacement
Gage Lengths (> 2 to 25) in	(> 2 to 25) in	70*L* + 35 µin	Gage blocks
Gage Length	Up to 8 in	0.0013 in	Caliper
Micrometers[3] –	Up to 6 in (> 6 to 20) in	(69 + 0.6*R*) µin (200 + 0.6*R*) µin	Gage blocks

Parameter/Equipment	Range	CMC[2] (±)	Comments
Microscopes[3] – Displacement	Up to 1 in Up to 25.4 mm	57 µin 1.7 µm	ASTM E1951 stage micrometers

II. Electrical – DC/Low Frequency

[1] This laboratory offers commercial calibration service and field calibration service.

[2] Calibration and Measurement Capability Uncertainty (CMC) is the smallest uncertainty of measurement that a laboratory can achieve within its scope of accreditation when performing more or less routine calibrations of nearly ideal measurement standards or nearly ideal measuring equipment. CMCs represent expanded uncertainties expressed at approximately the 95 % level of confidence, usually using a coverage factor of $k = 2$. The actual measurement uncertainty of a specific calibration performed by the laboratory may be greater than the CMC due to the behavior of the customer's device and to influences from the circumstances of the specific calibration.

[3] Field calibration service is available for this calibration. Please note the actual measurement uncertainties achievable on a customer's site can normally be expected to be larger than the CMC found on the A2LA Scope. Allowance must be made for aspects such as the environment at the place of calibration and for other possible adverse effects such as those caused by transportation of the calibration equipment. The usual allowance for the actual uncertainty introduced by the item being calibrated, (e.g. resolution) must also be considered and this, on its own, could result in the actual measurement uncertainty achievable on a customer's site being larger than the CMC.

[4] In the statement of CMC, percentages are percent of reading unless otherwise indicated.

[5] Uncertainties may differ depending on the performance of artifact being measured at the time of calibration and the resolution of the device under test.

[6] The stated measured values are determined using the indicated instrument (see Comments). This capability is suitable for the calibration of the devices intended to measure or generate the measured value in the ranges indicated. CMC's are expressed as either a specific value that covers the full range or as a percent or fraction of the reading plus a fixed floor specification.

[7] This scope meets A2LA's *P112 Flexible Scope Policy*.

[8] L is the numerical value of the nominal length of the device measured in inches, R is the resolution of the unit under test.

[9] The type of instrument or material being calibrated is defined by the parameter. This indicates the laboratory is capable of calibrating instruments that measure or generate the values in the ranges indicated for the listed measurement parameter.
